PROFESSIONAL SUMMARY

Full-stack developer with nearly 4 years of experience building scalable web applications, backend APIs, AI-powered systems, and internal engineering tools using Next.js, React, NestJS, FastAPI, PostgreSQL, Redis, Docker, Azure DevOps, and Playwright.

TECHNICAL SKILLS

Languages: JavaScript, TypeScript, Python, C#, SQL, HTML5, CSS3

Frontend: Next.js, Nuxt 4, Vue.js 3, React.js, Tailwind CSS, Redux, Zustand, TanStack Query

Backend: NestJS, Node.js, Express.js, Django, FastAPI, .NET, REST APIs, WebSockets

Databases: PostgreSQL, MongoDB, Redis, Prisma ORM, TypeORM

Cloud & DevOps: Docker, Kubernetes (basic), Azure Static Web Apps, Azure DevOps, Azure AD, CI/CD, GitHub Actions, RabbitMQ

Testing: API Testing, Pytest, Playwright, Postman, E2E Testing

Auth & AI: OAuth 2.0, JWT, Auth.js, RBAC, OpenAI, Claude, Gemini, Vercel AI SDK

WORK EXPERIENCE

Fullstack Developer

Apr 2026 – Present

PropertyLoop

Remote

- Developed an internal bookmark management and developer resource platform serving as a centralized hub for engineering teams, improving resource discoverability and internal workflow efficiency.
- Built and deployed the platform using Azure Static Web Apps with CI/CD pipelines configured through Azure DevOps, streamlining deployment workflows and improving release consistency.
- Implemented secure company-only authentication and access control using Azure Active Directory, ensuring protected access for internal employees and teams.

Fullstack Developer

Jan 2024 – Jan 2026

Codseg / Paradigm Shift AI

Remote

- Django API Testing Platform: Designed and executed a comprehensive API test suite for a large-scale DOE Django application using Pytest, Postman, and Playwright, achieving ~90% endpoint coverage across 80+ routes; extended coverage with end-to-end UI tests that surfaced critical regression issues prior to production deployment.
- AI Quiz Platform: Contributed as a full-stack developer on a quiz platform serving 300+ users, delivering new feature modules, UI enhancements, and survey form pipelines; iteratively refined ChatGPT prompt templates for topic-specific quiz generation; used Prisma + PostgreSQL, NextAuth, and Framer Motion.
- PromptVault: Built a secure, multi-LLM prompt management platform integrating OpenAI, Anthropic, Gemini, Mistral, and Llama for text; DALL-E and Stable Diffusion for image generation; ElevenLabs for audio; and Exa AI for real-time search; virtualised chat history rendering to keep the UI responsive across 100+ messages.
- PennyFlo — Invoice Generator: Added AI-driven invoice generation to a SoW-to-invoice automation platform used by ~50 users; engineered structured JSON streaming via Vercel AI SDK; built a PDF annotation feature highlighting exact SoW clauses, reducing client invoice ambiguity.
- AI Agent Benchmarking Platform (Paradigm Shift AI): Built a ground-up platform for benchmarking AI agents against real-world task lists (e.g., WebVoyager); designed RBAC schema and Auth.js authentication; added Redis caching for leaderboard data; integrated with a FastAPI backend containerized via Docker and orchestrated through Argo Workflows.

Teaching Assistant & Frontend Mentor

Jul 2023 – Jan 2024

NxtWave Disruptive Technologies

Remote

- Mentored 300+ students in full-stack concepts including React.js lifecycle methods, hooks, state management, and REST API integration.
- Debugged 500+ student codebases, identifying common anti-patterns in JavaScript execution, asynchronous logic, and web concepts (event loops, promises, async/await).

Math Expert

May 2022 – Jul 2023

Photomath

Remote

- Solved 1,000+ complex mathematical problems across calculus, algebra, geometry, and statistics, ensuring accuracy and clarity in step-by-step solutions.
- Maintained 95% quality rating by providing detailed explanations that enhanced user understanding of mathematical concepts and problem-solving techniques.

PROJECTS

FinTech Core API | *NestJS, TypeScript, PostgreSQL, TypeORM, Redis, RabbitMQ, Docker* | [Source Code](#)

- Production-grade event-driven FinTech REST API featuring ACID-compliant double-entry ledger accounting, pessimistic row-level locking to prevent race conditions, and an alphabetical UUID sort algorithm for deadlock-free peer-to-peer transfers.
- Implemented Cache-Aside pattern with Redis dropping balance-check response times from ~15ms to <1ms with strict cache invalidation on every ledger write; decoupled transactional email delivery via RabbitMQ and a background worker consuming Brevo REST API.
- Hybrid Passport JWT strategy accepting both httpOnly cookies and Bearer tokens; full Docker Compose infrastructure for PostgreSQL, Redis, and RabbitMQ with named volumes.

Freelance Flow | *Next.js 16, FastAPI, PostgreSQL, Zustand, OAuth 2.0* | [Source Code](#)

- Production-ready invoicing and time-tracking platform for freelancers, automating invoice generation from tracked billable hours with PDF export, cutting manual billing time by ~50% for early users.
- Engineered robust state management with Zustand for client-side timer logic and TanStack Query for server state sync; secured access via OAuth 2.0 (Google/GitHub) with JWT in HttpOnly cookies; automated PDF generation using Python's ReportLab.

GitPulse | *Nuxt 4, FastAPI, Redis Pub/Sub, WebSockets, Docker* | [Source Code](#)

- Real-time distributed system streaming live GitHub event activity to connected clients via a Producer-Consumer Architecture; FastAPI backend consumes the GitHub Events API and broadcasts via Redis Pub/Sub over WebSockets.
- Achieved sub-millisecond broadcasting latency with optimized connection pooling and message serialization; orchestrated via Docker Compose with Nginx, monitoring, and 5-service setup.

Reverse ATS Builder | *Next.js 16, Google Gemini, Vercel AI SDK* | [Source Code](#)

- Intelligent tool transforming raw unstructured text into ATS-optimized LaTeX resumes; leveraged Google Gemini with structured prompt engineering and Vercel AI SDK for real-time token-by-token streaming; achieved 98% valid LaTeX output with a stateless, privacy-first architecture.

Handyman (Offline PWA) | *Next.js, Web Workers, Service Workers, Crypto API* | [Source Code](#)

- Privacy-first Progressive Web App featuring 25+ developer utilities running entirely offline; offloaded heavy computations to Web Workers for smooth 60fps UI; implemented local AES and Bcrypt cryptography via native browser APIs with a zero-knowledge, client-only data model.

Pastebin Lite | *Next.js 16, Redis (Upstash), TypeScript* | [Source Code](#)

- High-performance ephemeral text-sharing service with configurable view limits and TTL-based auto-expiry; used Redis atomic operations (INCR, EXPIRE, GETEX) to enforce strict concurrent view limits and prevent race conditions.

EDUCATION

Kakatiya Institute of Technology and Science

Bachelor of Science in Mechanical Engineering

Warangal, India

2013 – 2017
