Mohammed Jameel Shahid

+91-9346388036 | moshahid0324@gmail.com | LinkedIn | GitHub | Portfolio | Ramagundam, Telangana

Technical Skills

Languages: JavaScript, TypeScript, Python, C#, SQL, HTML5, CSS3
Frontend: Next.js, React.js, Nuxt 4, Vue.js, Tailwind CSS, Redux, Zustand, TanStack Query
Backend: NestJS, Node.js, Express.js, Django, FastAPI, .NET, Azure Functions, REST APIs, WebSockets
Databases: MySQL, PostgreSQL, MongoDB, Redis, Prisma ORM, TypeORM
Cloud & DevOps: Azure Functions, Azure Static Web Apps, Azure DevOps, Azure AD, Docker, Kubernetes (basic), CI/CD, GitHub Actions, RabbitMQ
Testing & Tools: Pytest, Playwright, Postman, API/E2E Testing, Claude Code, Cursor, Git
Auth & AI: OAuth 2.0, JWT, Auth.js, RBAC, OpenAI, Claude, Gemini, Vercel AI SDK

Work Experience

Fullstack Developer Apr 2026 – Present
PropertyLoop *Remote*
- Modernized internal dashboard experiences using React, collaborating with business and design teams on UI overhaul, while resolving UI defects and improving overall page usability.
- Built serverless pre-call routing with Azure Functions, NestJS, and MySQL to identify the correct surgery site from inbound caller numbers and select configured pre-call recordings for multi-location surgeries; validated releases through multiple smoke-testing cycles with QA.
- Developed an Azure Function for fuzzy patient matching against encrypted patient-roster demographic data, optimizing surname/postcode matching queries and handling unique versus ambiguous matches before PDS lookup; helped reduce EMMA patient call duration.
- Implemented a unified patient-feedback workflow across four repositories for SOFIA and NINA, including NestJS feedback APIs, multi-bot Slack notifications, CMS integration, and an Azure Function to surface orphaned NINA feedback when enquiry IDs were unavailable.
- Built and deployed an internal developer-resource platform using Next.js and Azure Static Web Apps with Azure DevOps CI/CD and company-only Azure AD authentication.

Fullstack Developer Jan 2024 – Jan 2026
Codseg / Paradigm Shift AI *Remote*
- Django API Testing Platform: Designed and executed a comprehensive API test suite for a large-scale DOE Django application using Pytest, Postman, and Playwright, achieving ∼90% endpoint coverage across 80+ routes; extended coverage with end-to-end UI tests that surfaced critical regression issues prior to production deployment.
- AI Quiz Platform: Contributed full-stack features for 300+ users, including UI modules, survey pipelines, and topic-specific quiz generation using Prisma, PostgreSQL, NextAuth, and prompt engineering.
- PromptVault: Built a secure multi-LLM platform integrating OpenAI, Anthropic, Gemini, Mistral, Llama, DALL·E, Stable Diffusion, ElevenLabs, and Exa AI; optimized chat-history rendering for 100+ messages.
- PennyFlo: Added AI-driven invoice generation and structured JSON streaming via Vercel AI SDK; built PDF annotation to highlight exact SoW clauses.
- AI Agent Benchmarking Platform: Built an AI-agent benchmarking platform with RBAC, Auth.js, Redis caching, and a Dockerized FastAPI backend orchestrated through Argo Workflows.

Teaching Assistant & Frontend Mentor Jul 2023 – Jan 2024
NxtWave Disruptive Technologies *Remote*
- Mentored 300+ students in full-stack concepts including React.js lifecycle methods, hooks, state management, and REST API integration.
- Debugged 500+ student codebases, identifying common anti-patterns in JavaScript execution, asynchronous logic, event loops, promises, and async/await.

Math Expert May 2022 – Jul 2023
Photomath *Remote*
- Solved 1,000+ complex mathematical problems across calculus, algebra, geometry, and statistics, ensuring accurate and clear step-by-step solutions.
- Maintained a 95% quality rating through detailed explanations that improved user understanding of mathematical concepts and problem-solving techniques.

Projects

FinTech Core API | *NestJS, TypeScript, PostgreSQL, TypeORM, Redis, RabbitMQ, Docker* | Source Code
- Production-grade event-driven FinTech REST API featuring ACID-compliant double-entry ledger accounting, pessimistic row-level locking, and an alphabetical UUID sort algorithm for deadlock-free peer-to-peer transfers.
- Implemented Cache-Aside Redis caching, reducing balance-check response times from ∼15ms to <1ms; decoupled transactional email delivery through RabbitMQ and a background worker.
- Implemented hybrid Passport JWT authentication supporting httpOnly cookies and Bearer tokens; containerized PostgreSQL, Redis, and RabbitMQ with Docker Compose.

Freelance Flow | *Next.js 16, FastAPI, PostgreSQL, Zustand, OAuth 2.0* | Source Code
- Production-ready invoicing and time-tracking platform automating invoice generation from tracked billable hours with PDF export, cutting manual billing time by ∼50% for early users.
- Used Zustand for client-side timer state and TanStack Query for server synchronization; secured access with OAuth 2.0 and JWT in HttpOnly cookies; automated PDF generation with ReportLab.

Education

Kakatiya Institute of Technology and Science Warangal, India
Bachelor of Science in Mechanical Engineering *2013 – 2017*
